Continuation of 11. does NOT place the application in condition for allowance because: Applicant's argument filed on 8/24/2010 has been considered but they are not found persuasive. The applicant argued on pages 2-3 of the Remarks/Arguments "It is respectfully submitted that Schutze'129 fails to teach "automatically calculating a contour of at least one object" and "automatically defining, based on the calculated contour, a nominal cutting line around the at least one object to be cut out" as recited in claim 25 of the present application. It is not found persuasive. Schutze'129 discloses "the object outline is produced by a microscope slide moved automatically under the control of a computer program in accordance with a predetermined pattern in an essentially circular or spiral shape around the chosen object 10 (Col. 7, lines 9-15). Therefore, Schutze teaches "automatically calculating a contour of the at least one object and defineing, based on the calculated contour, a nominal cutting line around the at least one object to be cut out". Applicant further argued on page 3 of the Remarks/Arguments, "it is respectfully submitted that neither Schutze'129, as shown above, nor Schutze'291, teaches or suggests automatically defining, based on the calculated contour, a nominal cutting line around the at least one object to be cutout as recited in claim 25 of the present application. It is not found persuasive. Schutze'291 discloses in Par. 15, "To do this, the laser micro-dissection system is equipped with an automatic surface area calculation function, which makes it possible, after the drawing of a cutting line around a desired object, for the area of the object thus selected and enclosed by this cutting line to be calculated" and also in Par. 42, "the software may exhibit a function for the automatic calculation of the surface content of a biological object selected and/or mark in the manner decribed previously".
